Students should have an understanding of the four operations which are: addition, subtraction, multiplication and division. Students should know the basics facts to 12, this includes the multiplication tables, basic division facts and basic addition and subtraction facts. Students should have some basic experience recognizing patterns and be able to determine what comes next in a pattern. Worksheets like this are valuable for students to use as they require the student to determine what operation they need to use. All to often, students are given the operation and then told to compute. Input output tables require students to look at the pattern, analyze what is happening, complete the tables and then state the rule. In essence, the students are required to think more with worksheets like these.Worksheets like these are suitable for students who are ready for them regardless of grade. Students in the third grade should be able to complete these worksheets. However, some students may be ready for these worksheets if they have the prior knowledge required. An extension to these worksheets would be for students to extend the patterns, what would the next 1, 2 or 3 numbers be in the patterns?
